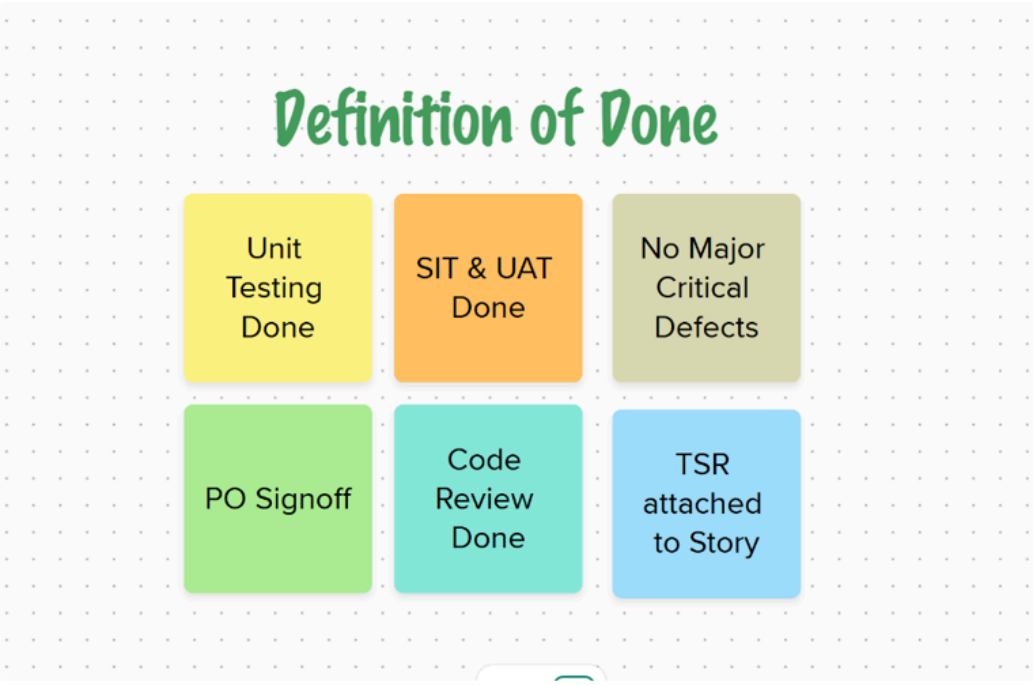
Definition of Done (DOD)

Definition of Done (DoD) for a Scrum Team

The **Definition of Done (DoD)** is a checklist that ensures a product backlog item (PBI), such as a user story, feature, or bug fix, meets the required quality standards before being considered **"Done"**. It ensures consistency, transparency, and high-quality deliverables.



A Scrum Team considers a User Story "Done" when it meets the following criteria:

1. Code Implementation & Peer Review

✅ The feature or functionality is implemented according to requirements.
✅ Code has been **peer-reviewed** and follows coding standards.
✅ No major **code smells** or **technical debt** introduced.

2. Unit & Integration Testing

✅ Unit tests have been written and successfully executed.
✅ Integration tests have been conducted where applicable.
✅ Test coverage meets the team's agreed standard (e.g., 80%+).

3. Functional & Acceptance Testing

✅ The feature meets all **Acceptance Criteria** defined in the user story.
✅ It has been **tested on different environments (QA, Staging, etc.)**.

✅ No critical or high-priority bugs remain.

4. Performance & Security Checks

✅ Performance benchmarks are met (e.g., response time, load handling).
✅ Security best practices are followed (e.g., input validation, authentication).

5. UI/UX Compliance

✅ The feature aligns with **design guidelines** and mockups.
✅ It has been **reviewed by the UI/UX team** (if applicable).
✅ It functions correctly on all target devices and browsers.

6. Documentation & Knowledge Sharing

✅ Relevant **code documentation** has been updated.
✅ API documentation (if applicable) is created or updated.
✅ User guides or release notes are prepared if necessary.

7. Deployment Readiness

✅ The feature has been successfully merged into the main branch.
✅ The deployment pipeline (CI/CD) has successfully built and deployed the changes.
✅ Rollback plan exists in case of failure.

8. Product Owner & Stakeholder Approval

✅ The **Product Owner has reviewed and accepted** the feature.
✅ The change aligns with the product vision and sprint goal.

9. Released to Production (if applicable)

✅ The feature is **deployed to production** and verified.
✅ Post-deployment testing (smoke tests) confirms stability.
✅ The feature is communicated to relevant stakeholders (e.g., customer support, marketing).

Example DoD Checklist for a Scrum Team:

Criteria	✅ / ❌ (Met / Not Met)
Code is written, reviewed, and merged	✅ ❌
Unit & integration tests passed	✅ ❌

Functional & acceptance tests completed	✅ ❌
No critical bugs remain	✅ ❌
UI/UX compliance checked	✅ ❌
Performance & security checks passed	✅ ❌
Documentation is updated	✅ ❌
Feature is deployed & tested	✅ ❌
Product Owner has approved the feature	✅ ❌

If all conditions are met, the user story is considered DONE and can be released! 🎉🚀
